                                                                                                                                                                                                                                                    SC9920 23498 bp DNA S.ceresvisiae chromosome XIII cosmid 9920. 248639 Z71257 Z18639.1 G1:732924 COX7; cytochrome oxidase; delta element; PETIII; transfer RNA-Ala.
              All CDS over 100 codons have been analysed. CDS that are completely overlapped and those that are overlapped by more than 50% of their length by a larger CDS have been omitted from this
                                           Notes:

The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous. The length in codons and the calculated codon adaptation index (CAI) is given for each CDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             is given for each CDS.
Cosmid 9920 is overlapped at the start of this sequence by cosmid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and at the end of this sequence Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     JOURNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with mis sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., bhred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E.,

Center project name: Li385
Center clone name: 337 F 19
Center clone name: M13; M77815; 100% of reads
Sequencing vector: M13; M77815; 100% of reads
Chemistry: Dye-primer-amersham; 3% of reads
Chemistry: Dye-primer-amersham; 3% of reads
Assembly program: Phrap; version 0.960731
Censensus quality: 191830 bases at least Q40
Censensus quality: 191830 bases at least Q40
Censensus quality: 19935 bases at least Q20
Insert size: 206529; sum-of-centigs
Quality coverage: 4.0 in Q20 base; agarose-fp
Quality coverage: 4.1 in Q20 base;
Censists of 23 centigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the centigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

On Aug 25, 1998 this sequence version replaced gi:3402643.
Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by

Sequence similarities were identified using Powerblast by Jinghui

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 9 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

FEATURES source repeat_region Group. Further III. O. together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at IMPORTANT: This sequence is not the entire insert of clone RP6-190D15 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP4-537K23 is at 28759 in this sequence. The true right end of clone RP4-753P9 is at 100 in this sequence. Location Qualifiers http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X constructed by the Sanger Centre Chromosome X mapping Group.                                                                                                                                                                                                    During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; TT:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP than the feature table with their source databases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13671

New promoter sequences from Saccharomyces cerevisiae useful for controlling expression of homologous and heterologous nucleic acid expression in yeast cells.

WPI; 2001-367697/38.

Belfield G,

Oakley

Claim 1; Page 67-68; 191pp; English.

The invention relates to yeast promoters that are used to control the expression of homologous and heterologous nucleic acids encoding proteins and polypeptides in yeast cells. The yeast promoters are induced by a fermentable carbon source such as glucose or a non-fermentable carbon source such as glucose or a non-fermentable carbon source such as ethanol or both. Therefore expression of nucleic acid molecules encoding a polypeptide under the control of the novel yeast promoters are regulated by varying the level of a fermentable carbon source or a non-fermentable carbon source or both. The yeast promoters

Example 4; Page 133-143; 191pp; English

The invention relates to yeast promoters that are used to control the expression of homologous and heterologous nucleic acids encoding proteins and polypeptides in yeast cells. The yeast promoters are induced by a fermentable carbon source such as glucose or a non-fermentable carbon source such as ethanol or both. Therefore expression of nucleic acid molecules encoding a polypeptide under the control of the novel yeast promoters are regulated by varying the level of a fermentable carbon source or a non-fermentable carbon source or a non-fermentable carbon source or both. The yeast promoters are useful for, inter alia, the high level production of proteins or polypeptides in yeast cell culture. The present sequence is pYMR251AP plasmid related to the invention. This plasmid contains pPRB1 and yeast YMR251MA promoter

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
The invention relates to yeast promoters that are used to control the expression of homologous and heterologous nucleic acids encoding proteins and polypeptides in yeast cells. The yeast promoters are induced by a fermentable carbon source such as glucose or a non-fermentable carbon source such as ethanol or both. Therefore expression of nucleic acid molecules encoding a polypeptide under the control of the novel yeast promoters are regulated by varying the level of a fermentable carbon source or a non-fermentable carbon source or both. The yeast promoters
                                                                                                                                                                                                                                                                                                     New promoter sequences from Saccharomyces cerevisiae useful for controlling expression of homologous and heterologous nucleic acexpression in yeast cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Saccharomyces cerevisiae Unidentified.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      are useful for, inter alia, the high level production of proteins or polypeptides in yeast cell culture. The present sequence is pYMRZ51AP+luc sequence DNA construct related to the invention. The pYMRZ51AP+luc sequence contains pPRB1 plasmid, luc backbone (luciferase gene) and yeast YMRZ51WA promoter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 13073 BP; 3584 A; 2949 C; 2934 G;
                                                                                                                                                                                                      496

                                                                                                                                                                                                                                                                                                                           The invention relates to yeast promoters that are used to control the expression of homologous and heterologous nucleic acids encoding proteins and polypeptides in yeast cells. The yeast promoters are induced by a fermentable carbon source such as glucose or a non-fermentable carbon source such as ethanol or both. Therefore expression of nucleic acid molecules encoding a polypeptide under the control of the novel yeast promoters are regulated by varying the level of a fermentable carbon source or a non-fermentable carbon source or a non-fermentable carbon source or a non-fermentable carbon source or both. The yeast promoters are useful for, inter alia, the high level production of proteins or polypeptides in yeast cell culture. The present DNA sequence is Saccharomyces cerevisiae YMR251WA promoter region related to the
                                                                                                                                                                                                                                                                                   Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New promoter sequences from Saccharomyces cerevisiae useful for controlling expression of homologous and heterologous nucleic a

This invention describes a novel nucleic acid representing a synthetic CC Bax gene. The Bax gene of the invention is useful for identifying Bax-CC resistant yeast or fungi, identifying, or obtaining and identifying CC candida spp. sequences that are differentially expressed in a pathway CC eventually leading to programmed cell death or identifying inhibitors or inhibitor sequences of Bax-induced cell death. The products of the CC invention have cytostatic, fungicide; immunosuppressive, virucide and CC vasotropic activity and can be used in vaccines or for gene therapy. The CC isolated nucleic acids, polypeptides, pharmaceutical compositions, CC antisense molecules and antibodies are useful as medicaments or in CC preparing a medicament for treating, preventing and/or alleviating CC diseases associated with yeast or fungi or proliferative disorders, such CC as cancer, or for preventing apoptosis in certain diseases. The compounds CC preparing a medicament for modifying the endogenic flora of humans and CC preparing andicament for modifying the endogenic flora of humans and CC fungal infections. Apoptosis raleted diseases include autoimmune disease, CC ischaemia, diseases related with viral infections or neurodegenerations. This sequence represents a polynucleotide associated with the Bax gene CC described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches 498;

M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to

The invention describes an isolated polynucleotide a naturally occurring CC polynucleotide sequence at least 90 % identical to it, a polynucleotide CC complementary to it or an RNA equivalent of it. The purified secretory CC polypeptides (SPTM) and polynucleotides are useful in the diagnosis, CC study, prevention or treatment of diseases associated with decreased CC expression of functional SPTM, e.g. actinic keratosis, arteriosclerosis, CC bursitis, cirrhosis, hepatitis, polycythaemia vera, primary CC thrombocytopenia, anaemia, psoriasis, cancers including adenocarcinoma, CC leukaemia, myeloma or sarcoma, immune system disorder such as acquired cimmunodeficiency syndrome (AIDS), allergies, asthma, Crohn's disease, CC diabetes mellitus, plomerulonephritis, Goodpasture's syndrome, gout, CC Hashimoto's thyroiditis, hepatitis, multiple sclerosis, osteoporosis, CC disease, pick's disease, Huntington's disease, dementia, parkinson's CC disease, other developmental disorder of the central nervous system, CC disease, pick's disease, Huntington's disease, dementia, parkinson's CC disease, other developmental disorder of the central nervous system, CC mental disorder including mood, anxiety or schlzophrenic disorder, hybridisation and amplification technologies, e.g. in assessing gene CC expression patterns, to develop a transcript image for a particular cell or tissue, or to create transgenic animals to model human disease. This sequence encodes a human secretory protein isolated in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Panzer SR, L

                                                                                                                                                                                                                                                                                                                                                                 The invention relates to polynucleotide and polypeptide sequences CC associated with cancer, particularly colon cancer. Also disclosed are (i) CC an expression vector comprising the polynucleotide, (ii) a host cell CC transformed or transfected with the expression vector, (iii) an isolated antibody, or its antigen-binding fragment, which specifically binds to CC the polypeptide, (iv) a method of detecting or determining the presence CC of cancer in a patient, (v) a fusion protein comprising at least one of CC the polypeptides (vi) an oligonucleotide that hybridises to the CC polynucleotide sequence under highly stringent conditions, and (vii) a CC method of stimulating and/or expanding T cells specific for a tumour CC of C634S, C637S, C637S, C640S, C636S or one of the potential open reading CC frames (ORFS) of C636S. These polypeptides are encoded by the CC polynucleotide sequences, where both are capable of eliciting a humoral CC analysis, nucleic acid purification, preventing or treating cancer. CC particularly colon cancer. The polynucleotide and polypeptide sequences are also useful in DNA strand invasion, antisense inhibition, mutational CC analysis, nucleic acid purification, isolation of transcriptionally CC active genes, blocking or transcription factor binding, genome cleavage or in situ hybridisation, and as enhancers of transcription or CC biomarkers. This sequence represents a humon colon cancer associated CC cDNA. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at segdata.uspbto.gov
                                                                                                                                                                                                                                                                        Query Match

CC The present invention relates to the isolation of novel DNA-binding CC proteins (AAU18154-AAU18281), and CDNA and genomic sequences encoding for CC these proteins. DNA-binding proteins such as histones, chromo (chromatin CC organisation modifier) domain proteins, and y-box binding proteins may CC contribute to diseases resulting from aberrant DNA organisation and/or CC gene transcription. The sequences of the invention are useful in CC screening assays to identify antagonists and/or agonists that may enhance CC in block activities mediated by DNA-binding proteins. Blockers of DNA-CC binding proteins may be useful in treating disorders such as malignant CC diseases (e.g. cancer), autoimmune disorders (e.g. diabetes mellitus), CC rheumatic diseases (e.g. rheumatoid arthritis), genetic abnormalities CC (e.g. cystic fibrosis), infectious diseases (e.g. HIV) and neurological CC disorders (e.g. Alzheimer's disease). The polymuclocide sequences of the CC invention may also be used in gene therapy. AAS29158-AAS29239 represent CC genomic sequences encoding for novel DNA-binding proteins. Note: The Sequence data for this patent did not form part of the printed CC sequence data for this patent did not form part of the printed CC secification, but was obtained in electronic format directly from WIPO CC at fig. vipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  05-DEC-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ঠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and covarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and parasitic infections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Loc

Also included are recombinant vectors, host cells (expressing the protein), the extracellular matrix proteins (including their fragments, epitopes and homologues), an isolated antibody that their fragments, epitopes and homologues), an isolated antibody that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastatized in a patient; (f) assessing the prostate cancer has metastatized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient in the aggressiveness or indolence of prostate cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           prostate cells and corr
for detecting presence
